

Interview integrity report

SYNTHETIC SAMPLE - not a real candidate or device observation

Observations for human review. This report does not determine cheating, honesty, competence or hiring eligibility.

Session synthetic-sample-not-a-real-interview | Status: stopped

Started: 2026-09-18T19:38:21.061254+00:00 | Ended: 2026-09-18T19:38:21.073380+00:00

Executive summary (Evaluator-Optimizer Loop)

The session was monitored across 5 enabled technical scopes (accepted, displays, processes, synthetic, windows). 1 technical observation(s) were retained for human review. This summary was generated via deterministic fallback; human review is required as technical observations alone do not determine candidate integrity or qualification.

Synthesis status: fallback | Iterations: 3 | Compliance score: 70%

STATUS CATEGORY	TECHNICAL INDEX	COVERAGE	OBSERVATIONS
Review			
Recommended	92 / 100	30%	1

The index is an uncalibrated technical heuristic, not a misconduct probability. Missing checks are unknown. Eye position and answer timing never change the index.

Candidate choices and privacy

Selected scopes: displays, processes, windows

No keystrokes, passwords, desktop images, browser history, microphone audio or system audio were recorded. Optional camera frames were discarded locally. Matching metadata, aggregates and candidate notes are retained in the local session log for 24 hours; exported copies have their own retention.

Detector coverage at the final available sample

DETECTOR	STATUS / LIMITATION
OverlayDetector	partial - Synthetic metadata example; hidden GPU layers are unknown.
ProcessDetector	partial - Synthetic sample: no matching names.
AudioCaptureDetector	disabled - Not selected; audio is never recorded.
GazeDetector	disabled - Not selected; eye position is excluded from the index.
VirtualDisplayDetector	partial - Synthetic active-adaptor metadata; hidden hardware is unknown.
BrowserExtensionDetector	disabled - No candidate inventory imported.

Observations and alternative explanations

Overlay-style window observed

A synthetic window combines elevated stacking with overlay-like attributes.

Evidence: {"layered":true,"source":"synthetic fixture","topmost":true}

Observation confidence: 80% (heuristic, not validated).

Alternative explanation / limitation: Captions, accessibility tools and meeting controls can produce the same properties.

Candidate context and timeline

2026-09-18T19:38:21.068225+00:00 | Candidate context - SYNTHETIC EXAMPLE: Live captions were agreed before the interview.

2026-09-18T19:38:21.071373+00:00 | stopped - Synthetic example completed. No person or device was monitored.

Audit verification

4 chained events. Stored Ed25519 checkpoint verified before rendering.

Chain head: f5b757f35326c4aa6f7416cbb9d7ea004dec229a186542f1d212bd4312 added54c

Public key: +xeax9ncaGuF9ncpr4SjlppW64Lv7eLN3d/T0A641C4=

Bundle SHA-256: bfc92340147f934ad1b63c8190ad4754f88f67964ca32296cbd74a9ec2c6aa7f

Keep the signed JSON export for verification. The PDF is a human-readable rendering, not a digitally signed PDF. A public key must be pinned independently to authenticate its source; a candidate-controlled device is not a trusted attestation environment.

Reading-like movements, hidden GPU overlays, AI speech identification and concealed hardware are not established by this report. Compare the evidence with agreed interview rules and candidate explanations. No automatic hiring decisions are supported.

Report text preserves Unicode; the signed JSON provides the canonical audit log.
